# SecuPlace

Now with Wi-Fi and 3G

## Cost Effective, Wireless Professional Security with Live Video Verification

Secuplace offers professional-level security and a wider range of features than standard alarm systems:

- **Simple, flexible installation**, a fully wireless, Wi-Fi enabled system offering quick and easy installation in any location with one button automatic configuration
- **Convenience and peace of mind**, smartphone and web app enables full control on the go, anywhere, anytime
- **Total control live video verification** and live video on demand using IP cameras
- **Field proven and reliable** with versatile communication options including GSM/3G and Wi-Fi
- **A complete solution for the home or business** - A wide range of accessories available including motion, curtain, magnet, smoke and vibration detectors, offering both security and safety

### Complete Wireless Security

Secuplace offers a fully wireless professional system that is simple to install with minimal mess. The system also supports a one-button automatic configuration of all accessories.

### Flexible Installation Options

Secuplace now supports 3G and Wi-Fi and therefore offers the flexibility and convenience to install the panel in any location, not just within close proximity to the router.

### Field-Proven and Reliable

Secuplace is an award-winning alarm system, successfully installed in thousands of homes and businesses around the world. Reliable and secure, Secuplace utilizes multiple communication options, including GSM/3G and Wi-Fi.

### Wide Range of Accessories

The Secuplace panel has 32 zones and is therefore suitable for large and small installations. There is a wide range of compatible security and safety accessories available, including motion, curtain, magnet, smoke, and vibration to keep homes and businesses safe and secure.

### Remote Monitoring

Secuplace can be simply connected to a CMS enabling your customer to receive professional monitoring services. Upgrading the system by adding IP cameras enables both the CMS and the customer to benefit from receiving live video and images of any event.

### Remote Configuration and Setup

EL's remote programmer enables remote configuration and diagnostics of the Secuplace panel, saving you time and money on site visits.

### Smartphone and Web App

Homeowners can feel in control with Secuplace's simple to use smartphone app. The app enables users to simply arm or disarm their systems remotely, in addition to receiving real-time notifications of alarm events directly to their smartphones.

### Live Video Verification and Live Video on Demand

Homeowners receive still images or video clips from IP cameras directly to their smartphones if there is an alarm event in their homes. Additionally, there is a "look in" option enabling live video on demand and providing an unprecedented sense of control and peace of mind.
