### OVERVIEW

The 560 series switches are DIN Rail type industrial managed switches. They are designed with 8x Gigabit RJ45 ports and 4x 10Gb SFP+ slots for highly critical applications such as real time IP video surveillance, WiMax systems and Wireless APs.

These switches support ERPSv2 with easy to set up user interface, which allows it to recover from network disconnection in less than 20ms with 250 switches connected in a ring network topology while transmitting/receiving data at full network speed.

To optimize the industrial network environment the switches support advanced network features, such as Tag VLAN, IGMP snooping, QoS, LACP, ect.

The switches can be smartly configured through Web Browser, SNMP Telnet and RS232 local console.

The failure notifications are sent through e-mail, SNMP trap, Local/Remote system log or multiple event alarm relay.
