

WHY CHOOSE ABLOY ELECTRIC LOCKS?

Compared to other solutions like magnet locks or electric strikes, electric locks give long-lasting security that will not wear out. Still electric locking provides ultimate mechanical strength but uses power only while opening.

WITH ABLOY ELECTRIC LOCKS YOU GET

- 1. Wide product range
- 2. Complete solution
- 3. Energy saving
- 4. Safety with standards approvals
- 5. Aesthetic appearance
- 6. User friendliness
- 7. More functions

ELECTRIC LOCKS

ABLOY electric locks have been manufactured over 40 years, since 1970's. ABLOY motor lock was the first of its kind in the world, and since then we have proudly presented the best electric locking solutions to all around the world. Today we can offer a whole range of electric locks to secure different types of door environments. DIN range locks are designed to match the regulations and dimensions of the European markets but are known and used all around the world.

WITH THESE SYMBOLS YOU CAN EASILY FIND THE RECOMMENDED PRODUCTS AND FEATURES OF EACH LOCK

HANDLE USED indicates when handle is being pressed down

BOLT IN indicates when deadbolt is retracted

BOLT OUT indicates when deadbolt is completely drawn out and deadlocked

CYLINDER USED indicates when key is turned inside the cylinder

DOOR CLOSED indicates when trigger bolt is pressed in

CABLE SABOTAGE Indicates when cable is cut

EN179 standard for emergency exit products, exit route can be equipped by handles.

EN1125 standard for panic exit products, exit route must be equipped with panic bars.

EN1634 standard for fire door products, defines the category of fire insulation.

The following standards apply to specific lock cases depending on the category of use.
Exit standards require a lock case model with inside handle, push pad or panic bar that can always be used for safe exit.

ABLOY electric lock product range is available in two sets of models, single point locks and multipoint locks. They both share the same functionality and type of use, as the middle locks of the multipoint locks are based on the single point locks.

You can recognize multipoint locks from the product code which in mechanical, microswitch and solenoid locks ends with digit 6 or 7, and in motor locks begins with MP.

AS EXAMPLE:

- EL566/EL567 are the multipoint versions of EL560/EL561
- MP520 is the multipoint version of EL520

MULTIPOINT LOCKS

With ABLOY multipoint lock cases the level of security and protection of doors is reached to higher level. Locking solution with three lock cases connected together to function as one gives the best support to doors from bending without losing any of the ease of use compared to single point lock cases.

ABLOY multipoint locks offer several functional options with comprehensive selection of status indications on one multipoint locking solution. In addition to increased security, they offer the same versatility as ABLOY single point lock cases.

Multipoint locks are available also with flat forend. This new shape opens more possibilities for clean-cut installations in different types of doors. This reduces the door gap and gives excellent protection against fire, smoke and burglaries.

CERTA RANGE - MOTOR LOCKS

APPLICATION

ABLOY CERTA Motor locks are used in doors that require:

- Convenience (push / pull function)
- Security (no handles outside)
- High durability (high traffic doors)
- Door automation and controlled access

FUNCTION

ABLOY CERTA Motor lock has two deadlocking bolts: a double action bolt and a dead bolt. The deadbolt is withdrawn inside the lock case by motor and the double action bolt is released, when electrical control is on. Locks are always automatically deadlocked when the door is closed.

CONTROL SWITCH

Momentary (Public and Hi-security):

Dead bolt is retained inside the lock case adjustable delay between 2 - 15 seconds.

Continuous (Small business, Public and Hi-Security): Dead bolt is retained inside the lock case as long as electrical control is on.

When the door closes and the delay or electrical control is off, both bolts are deadlocked. In case of power failure the bolts are always deadlocked in categories Public (EL420, EL520) and Hi-Security (EL432, EL532). In category Small Business (EL418, EL518) the bolt remains its current position in case of power failure.

CERTA RANGE

HI-SECURITY

Hi-Security category locks are suitable for electrically controlled fire rated doors requiring extremely high level of security. Unlike other lock cases Hi-Security locks can be used in day mode (free access by pushing or pulling), night mode (deadlocked but exit-handle enabled) and also in secure mode (deadlocked and inside handle disabled). The inside handle is electrically controlled but in case of emergency or power failure the locks can be opened by the inside handle. Mechanical opening by cylinder is always possible.

STANDARD APPROVALS

CERTA RANGE PUBLIC

The Public category locks are suitable for exit doors (EN179/EN1125) and fire rated doors. Public range locks provide perfect combination of safety and security for number of different door environments. Locks can be used in day mode, where deadbolt is driven in giving free access and egress by pushing or pulling the door open. Other option is to use the lock in secure mode where the lock is automatically deadlocked when door is closed, but it can always be opened by inside handle. Mechanical opening by cylinder is also always possible.

SMALL-BUSINESS

The small business category locks provide perfect mechanical security combined with the best features of motor locks. These locks are ideal choice for high-traffic doors, where access control is required, but indication information or door automatics are not necessity. The locks can always be opened by inside handle. Mechanical opening by cylinder is also always possible.

SINGLE POINT LOCK CASES

EL418, EL518

MULTIPOINT LOCK CASES

SOLENOID LOCKS

ABLOY offers a full range of solenoid locks for different door styles and applications. The solenoid lock range comprises handle controlled locks in both single point and multipoint locking, but also sophisticated single point lock case with push/pull function.

As a trademark of ABLOY electric locks also Solenoid locks all share the high level of safety and exquisite finishing as a proof of worldwide known premium quality.

For different door styles and applications

APPLICATION

ABLOY Solenoid locks are used in the doors that require:

- Safety for EXIT doors, where the inside handle is always in function
- Convenience of push/pull function
- Controlled handle function

Typical applications are offices, meeting rooms and other interior doors of public buildings.

Solenoid lock range includes products for wooden and metal doors and for narrow profile doors as well as multipoint lock cases.

Solenoid locks can be used in exit doors equipped with exit handles, push pads or panic bars depending on the door type. The locks can also be electrically controlled by access control system or by other remote control system such as time control, keypad or push button.

FUNCTION

ABLOY handle controlled locks have two deadlocking bolts: a double action bolt and a deadbolt. The deadbolt is withdrawn inside the lock case and the locking of double action bolt is released by pushing the handle. The locks are always automatically deadlocked when the door is closed.

Handle controlled locks can be set to function as fail locked or as fail unlocked. In the fail locked setting, the lock can be opened by controlled handle when power is on, and can not be opened by controlled handle, when power is off. In the fail unlocked setting, the electrical function is the opposite.

Push/pull function lock has a deadlocking double action bolt, which is released by push pad or by electrical control. The lock with double action bolt can be used in both right- and left-handed doors and in full swing doors.

Handle controlled locks are best suited in medium traffic doors. The locks can be electrically controlled by access control system or by a remote control system such as timer, keypad or push button. The locks can be used in emergency exit, panic exit and fire rated doors (EN). The locks are not suitable for use with door automatics.

EL460 and EL560 with split spindle is chosen, when exit by handle is needed. Only outside handle is electrically controlled. The lock can always be opened by inside handle. Mechanical opening by cylinder is always possible

EL461 and EL561 with straight spindle is used, when both access and exit are controlled. Both inside and outside handles are simultaneously controlled and released. Mechanical opening by cylinder or thumbturn is always possible.

EL460, EL461

EL460 and EL461 are used in narrow profile doors.

EL560, EL561

EL560 and EL561 are used in wooden and metal doors.

^{*} EL461 and EL561 are not EXIT-approved.

SOLENOID LOCKS

HANDLE CONTROLLED MULTIPOINT LOCKS

Handle controlled locks are best suited in medium traffic doors. They can be electrically controlled by an access control system or by a remote control system such as timer, keypad or push button.

Handle controlled multipoint locks contain main solenoid lock in the middle based on a single point lock of the chosen category and two auxiliary locks with hook bolts. All three lock cases share the same forend and are controlled by the main handle controlled lock in the middle. The multipoint locks are recommended to be used in security doors, fire doors or other doors with higher profile in e.g. storage rooms and technical maintenance rooms.

Handle controlled multipoint locks can be used in emergency exit, panic exit and fire rated doors (EN). The locks are not suitable for use with door automatics.

EL466 and EL566 with split spindle is chosen, when exit by handle is needed. Only outside handle is electrically controlled. The lock can always be opened by inside handle. Mechanical opening by cylinder is always possible.

EL467 and EL567 with straight spindle is used, when both access and exit are controlled. Both inside and outside handles are simultaneously controlled and released. Mechanical opening by cylinder or thumbturn is always possible.

EL466, EL467 EL466 and EL467 are used in narrow profile doors.

EL566, EL567

EL566 and EL567 are used in wooden and metal doors.

^{*} EL467 and EL567 are not EXIT-approved.

SOLENOID LOCKS

PUSH&PULL FUNCTION

ABLOY EL404 lock case with double action bolt features an innovative adjustable backset technique. ABLOY EL404 is typically used in narrow profile exterior doors of apartment buildings and interior doors of business premises. The lock has a double action bolt construction for durable and easy use and it offers a cost effective way of electric locking that is highly advantageous in comparison to e.g. electric strike.

ABLOY EL404 can be controlled by a variety of control devices such as card reader, keypad or timer. The lock can be connected to door automatics and is an excellent solution for use with access control systems. Horizontal frame mounting above the door is also possible.

Because of its unique symmetrical trigger bolt ABLOY EL404 can be used in swinging doors.

With EL404 door can be opened by pushing or pulling when electric control is switched on.

EL404 can be configured to operate also fail unlocked, then the door can be opened by pushing or pulling when the electric control is switched off.

Lock can always be opened by key, by thumbturn or by push pad in EXIT doors. For higher security the lock deadlocks automatically when the door closes.

Functional features

- Adjustable backset
- Non-handed, symmetrical trigger bolt
- Immediate release of deadlocking
- Configurable fail locked / fail unlocked
- Wide operating voltage

ABLOY EL404 is not recommended for use in doors with seal force or in fire rated doors. In swing doors the lock may be locked only when the door has completely stopped in the closed -position.

EL404

INDICATIONS

MECHANICAL / MICROSWITCH LOCKS

DIN range includes also microswitch- and mechanical lock cases with the same dimensions with handle controlled solenoid locks. Both microswitch and mechanical locks share also the same mechanical strength as handle controlled solenoid locks to guarantee the high level of security.

Microswitch and mechanical locks are available both in single point and multipoint lock versions.

Microswitch locks are used in doors where door status indications are required but the electric function is not a necessity. Door can be connected to alarm system but not for example to door automatics.

Mechanical locks are used in door environments not requiring any electric functions or indications.

Microswitch and mechanical lock cases are recommended to be used with the inside handle only. The lock can always be opened by inside handle, so these locks can be used in EXITdoors. Opening from outside by cylinder is always possible.

Not used with mechanical locks.

INDICATIONS

STANDARD APPROVALS

ACCESSORIES

Use original ABLOY accessories to ensure the correct function on the lock and the door environment. The ABLOY electric locks are designed and tested together as a package with ABLOY accessories. Therefore it is highly recommended to use the correct components to ensure the safety and security of the door.

By choosing the model-specific ABLOY striker plate the electric locks work in the door as smoothly and long-lastingly as they are designed to.

ABLOY lead covers assure the safe connection for the cable from door to the frame. Lead covers protect the wires and increase the durability of the cable. Lead covers are available in two versions. EA280 is recommended to doors with maximum opening angle of 120°. The longer version EA281 is recommended to doors with maximum opening angle of 180°.

EN14846

- THE STANDARD FOR ELECTROMECHANICAL LOCKS

All of our DIN Range lock cases are officially tested and approved according to the new standard for electromechanical lock cases. EN14846 combines the mechanical strength tests (former EN12209) with electric testings, which means that the lock cases are now tested more versatile than ever before. As new tests the electric lock standard contains levels of lock status indications and electrical manipulation.

All of the DIN range lock cases are tested according to:

EN14846 standard for electromechanical locks, defines the category of use, mechanical strength and electrical features.

EMC testing for electromagnetic compatibility ensures that products are tested against electric emission and interference.
